

## USER TEST

Number of requirement which has been tested: 5

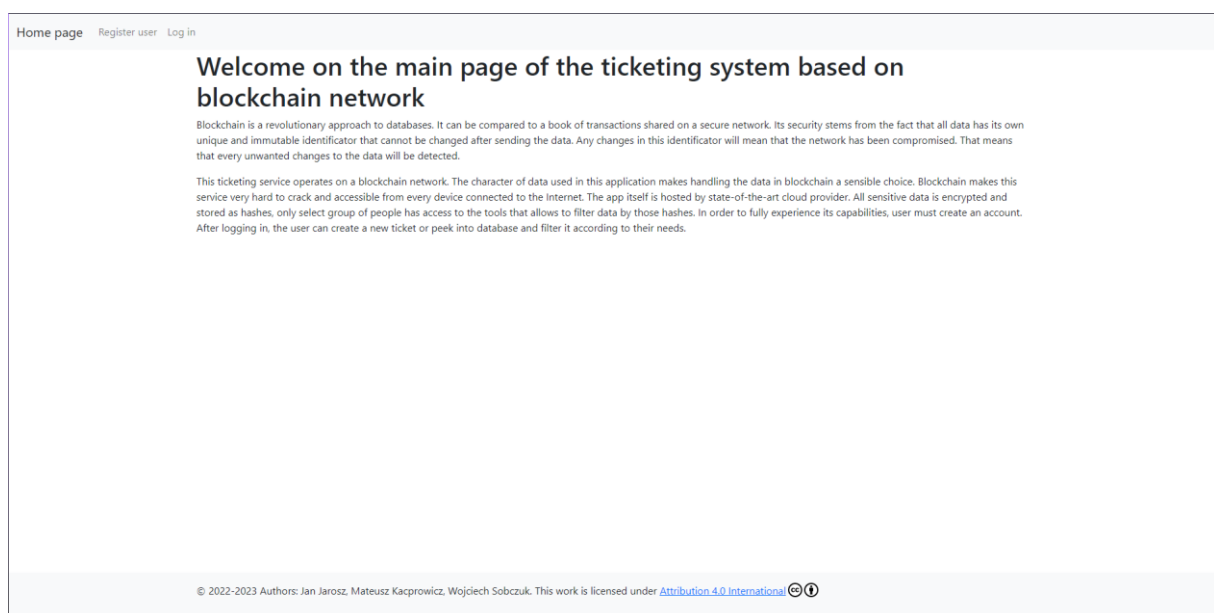

Requirement title: User Register Feature

Requirement description: User must be registered to be able to log-in

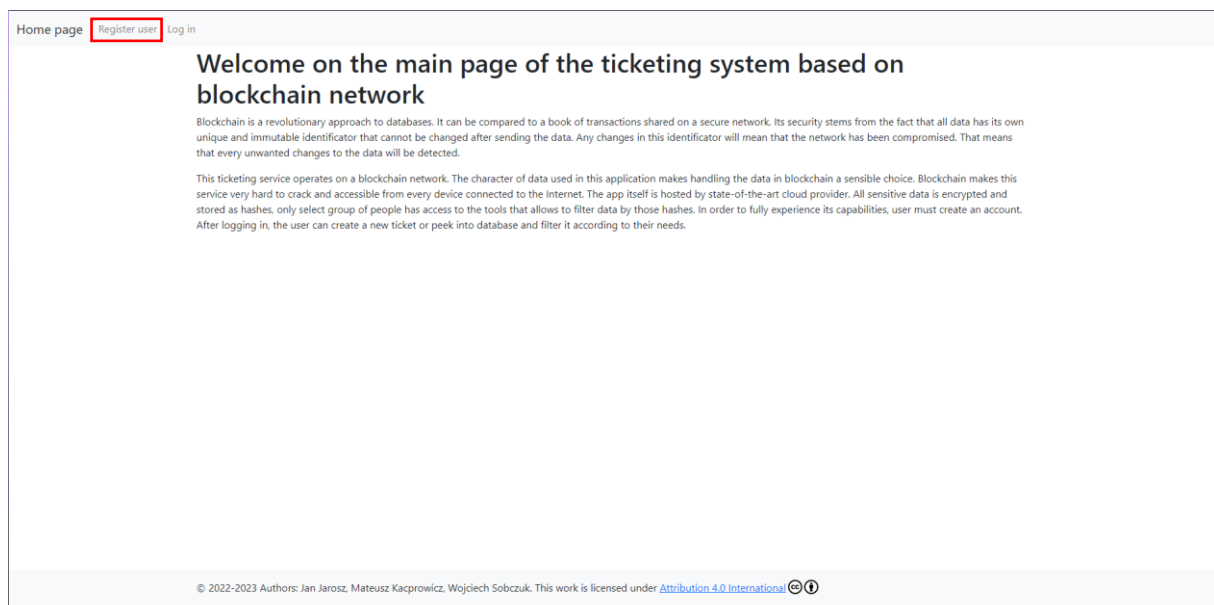

Test scenario: As user must be registered to be able to log in to the system, app must allow a user to register himself. Test process shows how user can be registered and effects of all actions.

Test process and results:

1. When user enters the website of application at first home page is opened.

2. From navigation bar on the top of the page "Register user" module should be opened.

### 3. View of the registration module:

Home page Register user Log in

4. User must type in his name and password. It seems that there are no restrictions of password form as there is no information what password should contain to be accepted. During the test such user names and password has been tested:  
User names: test; 1@3; 123  
Passwords: test; a b; 123  
After filling the form "Register" button must be clicked.
5. After filling the form and accepting it by clicking "Register" button a confirmation shows that user has been registered. After trying combinations of user name and password mentioned above all were successfully registered, so it confirms that there are no restrictions of password form.

User registered successfully
